These include the following: valuation of the reference asset(s) (including market disruption events) – please also note we do not perform any investigation or review of the reference asset(s) on behalf of any prospective investor in the securities: exchange rates, interest rates, inflation, yield, correlation, volatility, creditworthiness of the issuer, liquidity risk in the secondary market and leverage, path dependency, listing and legal and regulatory considerations. Additionally, the Issuer may establish, maintain, adjust or unwind its hedge positions with respect to the securities. Any hedge positions are the proprietary trading positions of the Issuer. PRODUCT SPECIFIC RISKS

Exotic Option: The securities are linked to a type of option known as an "exotic" option, so called because some of its features are more complicated than those of a simple or "plain vanilla" call or put option. Generally these features will involve a significantly change to the return of the securities if certain very specific events occur such as a Barrier feature whereby the return of the securities can change significantly if the reference asset(s) pass through a pre-determined barrier level. These features may also shorten considerably the maturity date of the securities such as a Callable feature whereby the securities may be called automatically by the Issuer should certain events occur. Other features may alter the composition of the reference asset(s) depending on the performance of each asset relative to one another. These features are explained in more detail in the documentation of the securities and you should make sure you understand the effect of these features fully before deciding whether to purchase the securities.
